BAX® System Q7

Real-Time PCR Assay for Genus *Listeria*

The BAX® System Real-Time PCR assay for Genus *Listeria* can help companies monitor their environment and products for contamination with *Listeria*, a common indicator organism for other pathogens, including *Listeria monocytogenes*. With a shortened, simplified sample preparation procedure and rapid real-time processing, this assay provides a fast and accurate molecular testing method for *Listeria* species in food and environmental samples.

PERFORMANCE TESTED
AOAC RESEARCH INSTITUTE
LICENSE NUMBER   081401

NF VALIDATION EN ISO 16140

QUA 18/09 - 01/19
Alternative Analytical
Methods for Agribusiness
http://nf-validation.afnor.org/en

Features & Benefits:

- Clear yes-or-no results in as little as 23 hours for select matrices
- Compatible with other BAX System assays for efficient processing
- Carefully designed primers target specific genetic sequences possessed only by the target organisms
- Validated to perform as well or better than standard reference methods for listed product types
- Minimal components and simplified workflows to maximize efficiency and ease-of-use
- Internal controls included in every test to validate results even in absence of target
- Flexible protocols available to meet your unique workflows
- Internally validated for quantification of *Listeria* in lettuce and laboratory swabs and cultures

## Validations, Certifications and Approvals:

- **AOAC Research Institute**
  Performance Tested Method[SM] #081401
  Validated on frankfurters, cooked shrimp, smoked salmon, spinach, bagged lettuce, queso fresco cheese, stainless steel, plastic and sealed concrete.

- **NF VALIDATION – certificate granted by AFNOR Certification** QUA 18/07 – 01/19
  Certified according to NF validation rules for all human food products and industrial production environmental samples.

| Product No.	Description	Quantity
KIT2019	BAX® System Real-Time PCR Assay Genus *Listeria*	96 tests per kit

BAX System Protocol*

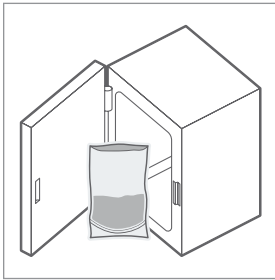

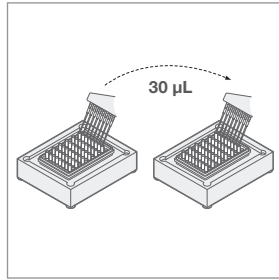

Enrich samples.
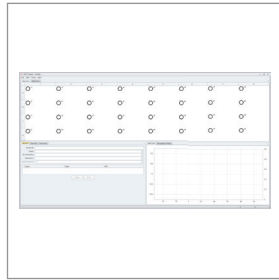

Create rack file and warm up cycler.

200 µL

Add protease and lysing agent to lysis buffer bottle, mix then dispense 200 µL of solution into cluster tubes.

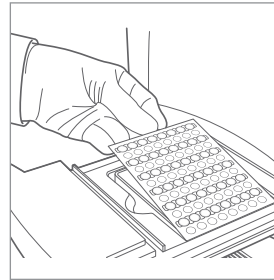

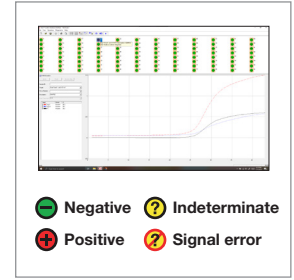

5 µL

Transfer 5 µL sample enrichment to cluster tubes.

Place samples on automated thermal block for lysis and cooling.

30 µL

After transferring lysates to PCR tubes in a cooling block, hold for 10-30 minutes.

Place sealed PCR tubes in cycler and immediately click "NEXT" to run program.

⊖ Negative ? Indeterminate
⊕ Positive ? Signal error

Review results.

*Refer to Ready Reference Guide for detailed steps.
