

# MicroSnap® | EB (*Enterobacteriaceae*)

MicroSnap® EB rapidly detects and enumerates *Enterobacteriaceae* (EB) bacteria in food or surface samples. Organisms are detected in 6 or 7 hours, enabling MicroSnap EB to give results in the same working day or shift.

### Enables fast, evidence-driven decisions

- Quantitative results in as few as 6 hours
- Large enumerable range
- Real-time data synchronization between EnSURE® Touch and SureTrend® provides rapid alerts for early risk mitigation

### Maximizes operational efficiency

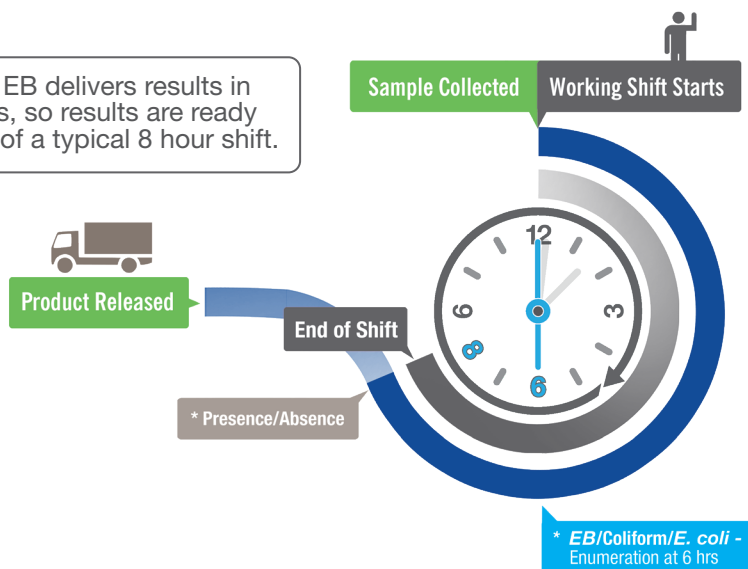

- Fewer steps compared to other methods, minimizing human error and variability
- Easy sample collection for liquid, solid and surface testing
- Reduced cost compared to traditional in-house methods or expensive third-party testing labs

### Delivers maximum precision & accuracy

- Advanced biochemical detection paired with the highly sensitive EnSURE Touch luminometer
- Eliminates errors associated with manual colony counting and the need for repeat testing

MicroSnap EB delivers results in 6 or 7 hours, so results are ready by the end of a typical 8 hour shift.

Catalog No.	Description	Quantity
MS1-EB	MicroSnap® EB Enrichment Device	100
MS2-EB	MicroSnap® EB Detection Device	100
MS1-EB-BROTH-9ML	MicroSnap® Enhanced EB Broth	100

### EnSURE® Touch Monitoring System

EnSURE Touch is a high-sensitivity luminometer that measures multiple quality tests such as ATP, EB, total viable counts, coliform, *E. coli*, and more. In addition, data from test results can be sent to SureTrend software to record, trend and analyze results over time. Get real-time notification and take your environmental monitoring program to the next level.

EnSURE Touch and Charging Dock

### MicroSnap® *E. coli*

delivers quantitative test results in as few as 6 hours.

### MicroSnap® Total

delivers quantitative test results in 7 hours.

### MicroSnap® Coliform

delivers quantitative test results in as few as 6 hours.
